

Django Beginner Assignment: Personal Portfolio

Objective

Build a simple Personal Portfolio Website using Django, HTML, and CSS. The main goal is to practice the basic Django flow:

Model → View → URL → Template

Required Features

1. Home Page

Create a homepage containing:

- Your name
- Profile picture
- Short introduction
- Your skills

Navigation menu

2. Projects Page

Create a Project model with:

- Project title
- Short description
- Technology used
- GitHub link

Display all projects on the Projects page.

3. Project Details

When a user clicks a project, show its complete information on a separate page.

Example:

/projects/

/projects/1/

/projects/2/

4. Django Admin

Use the Django Admin Panel to:

- Add projects
- Edit projects
- Delete projects

5. Basic Design

Use HTML and CSS to create:

- Navbar
- Project cards
- Buttons
- Footer

Simple responsive layout

Django Requirements

Students must use:

1. Model → Store project information
2. View → Fetch and display projects
3. URL → Create page routes
4. Template → Display data
5. Admin → Manage projects
6. Static files → CSS

Expected Pages

- Home
- Projects
- Project Details
- Admin

Bonus Features

1. Add an About page.
2. Add project images.
3. Add a GitHub button.
4. Add a contact section.

Submission Guidelines

1. Submit your project through a public GitHub repository.
2. Make sure the repository contains all required project files.
3. Organize your files and folders properly.
4. Add a meaningful README.md containing:
 - Project name
 - Short description
 - Features
 - Technologies used
 - Installation/setup instructions
5. Add screenshots of your project to the README.
6. Make sure the project runs successfully before submission.
7. Once you submit your repository, do not change, update, or upload any code until you receive feedback.
8. Do not submit copied projects. Write and understand your own code.
