Assignment: Personal Expense Tracker

Overview

Project

Build a **Personal Expense Tracker** web application where users can manage their daily income and expenses.

The application should allow users to add transactions, view their transaction history, calculate their total income and expenses, and track their remaining balance.

Required Features

1. Dashboard

Display the following information:

- Total Income
- Total Expenses
- Current Balance

All amounts should update automatically whenever a transaction is added or deleted.

2. Add Transaction

Create a form with the following fields:

- Transaction Title
- Amount
- Transaction Type (Income / Expense)
- Category (Food, Shopping, Salary, Transport, etc.)
- Date

Include an Add Transaction button.

3. Transaction History

Display all transactions in a table or card layout.

Each transaction should show:

- Title
- Amount
- Category
- Type
- Date

4. Delete Transaction

Users should be able to delete any transaction from the transaction history.

After deleting a transaction, update the dashboard totals automatically.

5. Filter Transactions

Users should be able to filter transactions by:

- All Transactions
- Income
- Expenses

6. Data Persistence

Use JavaScript LocalStorage to save transactions.

When users refresh or reopen the browser, their previously added transactions should still be available.

7. Responsive Design

The application must work properly on:

- Desktop
- Tablet
- Mobile

Additional Requirements

- Validate all form inputs.
- Do not allow empty fields or invalid amounts.
- Show a message when there are no transactions.
- Display a success message after adding a transaction.
- Use a clean and user-friendly interface.

Bonus Challenges (Optional)

- Add an Edit Transaction feature.
- Add a search option to find transactions by title.
- Add a confirmation dialog before deleting a transaction.
- Show monthly expense summaries.

Submission Guidelines

1. Complete the project individually.
2. Push your source code to a public GitHub repository.
3. Include a README.md file explaining the project and how to run it.
4. Submit your GitHub repository URL.
