Assignment: Food Delivery Landing Page 🍔

Topic: Modern UI Development — Tailwind CSS & Responsive Design

🎯 Objective

Build a modern, attractive, and responsive landing page for a food delivery website using HTML and Tailwind CSS.

📋 Project Requirements

Create a landing page for a fictional food delivery service named **FoodieExpress**.

1. Navbar

- Display the website logo/name: FoodieExpress.
- Add navigation links: Home, Menu, About, Contact.
- Add an "Order Now" button.

2. Hero Section

- Add a catchy heading, such as "Delicious Food Delivered to Your Door."
- Include a short description.
- Add an "Explore Menu" button.
- Display an attractive food image.

3. Popular Dishes

Display at least **3 food cards**. Each card should include:

- Food image.
- Food name.
- Short description.
- Price.
- An "Order Now" button.

4. Why Choose Us?

Display at least 3 benefits:

- Fast Delivery
- Fresh Ingredients
- Affordable Prices

You may use simple icons or emojis.

5. Special Offer Section

- Add a promotional heading, such as "Get 20% Off Your First Order!"
- Include a short description.
- Add a "Claim Offer" button.

6. Footer

- Display the website name.
- Add copyright text.
- Include at least 2 social media links.

🎨 Design Requirements

- Use Tailwind CSS for all styling.
- Use Flexbox or Grid to arrange the content.
- Make the website responsive on mobile, tablet, and desktop.
- Use responsive classes such as `sm:`, `md:`, and `lg:`.
- Add hover effects to buttons and food cards.
- Maintain consistent colors, spacing, and typography.

🛠️ Technical Requirements

- Use HTML and Tailwind CSS.
- Tailwind CSS CDN is allowed.
- JavaScript is optional.
- No backend or actual ordering functionality is required.
- Do not use Bootstrap or other CSS frameworks.

⭐ Bonus Challenges (Optional)

- Add a food category section (Pizza, Burger, Drinks, etc.).
- Add a discount badge to a food card.
- Add a mobile-friendly navigation menu.
- Add a customer review section.

📤 Submission Guidelines

1. **Submit your GitHub repository link.**

Important: Focus on practicing Tailwind CSS utilities, responsive breakpoints, Flexbox, and Grid. Keep the design simple, clean, and user-friendly.

Good luck, everyone! 🚀
